## TABLE OF CONTENTS

		Page
<b>I</b>	<b>SUMMARY</b>	1
	A. INTRODUCTION	1
	B. FINDINGS	3
	1. PHA Properties and Potential Markets	3
	2. Estimated Costs of Production	3
	3. Environmental, Sustainability, and other Benefits	6
	4. Current and Potential Participants and Development Pathways	9
<b>II</b>	<b>INTRODUCTION</b>	11
	A. REPORT FOCUS	11
	B. REPLACING PETROLEUM FOR A SUSTAINABLE ECONOMY	12
	C. BIOTECH-BASED PRODUCTS	13
	D. INDUSTRIAL BIOTECH STRATEGIES	13
	E. DIRECT POLYMERS VERSUS PARTIAL BIOTECH ROUTES	14
	F. PHA APPLICATIONS	14
	G. METABOLIX GMO STRATEGIES	15
	H. NEW EMPHASIS ON SWITCHGRASS	17
	I. EXTRACTING PHAs FROM CROPS	18
<b>III</b>	<b>METABOLIC ENGINEERING</b>	19
	A. CONCEPTS AND APPROACHES OF INDUSTRIAL BIOTECHNOLOGY	19
	1. Definitions	19
	2. Modes of Employing Enzymatic Processes	20
	3. Transgenic Methods	21
	4. Challenges of Enzymatic Polymer Process Development	21
	B. CASE STUDY – METABOLIX, INC.	25
	1. Background of Metabolix	25
	2. Substrate Strategies for Fermentation Routes to PHAs	26
	3. Patents	27
<b>IV</b>	<b>COMMERCIALIZATION OF PHAs</b>	34
	A. PHA/PHB COMMERCIALIZATION HISTORY	34
	B. PRICE COMPETITION	38
	C. PHA/PHB PROPERTIES	39

## TABLE OF CONTENTS (Continued)

	<b>Page</b>
D. BIODEGRADABLE AND BIOCOMPATIBLE PLASTICS	43
<b>V FERMENTATION BIOPROCESSING</b>	46
A. FERMENTATION FUNDAMENTALS	46
B. DOWNSTREAM PROCESSING	48
<b>VI CORN AGRICULTURE</b>	52
<b>VII SWITCHGRASS AGRICULTURE</b>	59
A. ADVANTAGES OF SWITCHGRASS FOR PHAs	59
B. SWITCHGRASS GROWING OPPORTUNITIES	61
C. SWITCHGRASS ECONOMICS	65
<b>VIII CORN PROCESSING TO SUGAR</b>	68
A. THE CORN VALUE CHAIN	68
B. CORN WET MILLING	72
<b>IX SOLVENT EXTRACTION</b>	75
A. BACKGROUND	75
B. CONVENTIONAL OIL EXTRACTION	76
C. MECHANICAL EXTRACTION	76
D. SOLVENT EXTRACTION	77
E. SOYA BEAN/OIL EXTRACTION ECONOMICS	80
1. Estimating Basis	80
2. Operating Costs	80
3. Capital Costs	81
4. Switchgrass Capital Cost – Analogy to Soybeans	82
5. Other Benchmark Economic Information	83
6. The Soybean “Crush Margin”	83
F. OTHER OIL EXTRACTION PROCESSES – ENZYME AND SUPERCRITICAL CO <sub>2</sub>	88

## TABLE OF CONTENTS (Continued)

		<b>Page</b>
<b>X</b>	<b>PHAs BY FERMENTATION</b>	90
	A. INTRODUCTION	90
	B. FERMENTATION PROCESS	90
	C. PHA EXTRACTION	93
	D. OVERALL ECONOMICS	94
	E. SENSITIVITY TO GLUCOSE PRICE	97
<b>XI</b>	<b>PLANTS AS PLANTS</b>	101
	A. GENERAL – STATUS OF GMO AGRICULTURAL PRODUCTS	101
	B. ECONOMICS OF PHAs FROM SWITCHGRASS	102
	1. Production Facility Requirements	102
	2. Switchgrass Farming	103
	3. Switchgrass Transportation	104
	4. Bulk Storage	104
	5. Switchgrass Processing for PHA Recovery	106
	6. Biomass Energy Recovery	107
	7. Summary of Plants as Plants Production Costs	107
	C. PHA PRODUCTION COST SENSITIVITIES	110
	1. Corn Instead of Switchgrass	110
	2. Capacity	112
	3. Switchgrass Price	113
	4. Operating Rate	113
	5. Capital Costs	113
	6. Overall Sensitivity Analysis	113
	<b>APPENDIX I</b> Glossary	115
	<b>APPENDIX II</b> Elements of Nexant/Chem Systems' Capital Cost Estimates	125
	<b>PERP TITLE INDEX</b>	130

## TABLES

		<b>Page</b>
Table I.B.1	Summary of PHA Economics	5
Table III.B.1	Metabolix U.S. and PCT Patents Plus Biopol™ Patents	28-29
Table III.B.2	Monsanto PHA Patents	30-31
Table III.B.3	Proctor & Gamble PHA Patents	32-33
Table IV.C.1	Nominal Physical Properties of PHBV	39
Table IV.C.2	Comparative Properties of PHB, PHO and PP	41
Table IV.C.3	Gas Permeability of Various Films	42
Table VI.1	Average Regional Corn Production Cost, 2000	56
Table VI.2	U.S. Average Corn Production Costs and Returns	58
Table VII.B.1	Switchgrass Economic Plant Potentials for Key States	64
Table VII.B.2	Switchgrass Cost of Production Model	67
Table IX.A.1	Typical Oil Content of Commodity Oilseeds	76
Table IX.E.1	Operating Costs for 1650 STPD Soybean Solvent Extraction, 1986	81
Table IX.E.2	Estimated Elements of Production Cost for Continuous Solvent Extraction of Vegetable Oils	83
Table X.D.1	Cost of Production Estimate for: PHAs via Fermentation Process: Metabolix – Analogy to L-Lysine	95
Table X.D.2	Cost of Production Estimate for: PHAs via Fermentation Process: Metabolix – Analogy RHM “Mycoprotein”	96
Table X.E.1	Cost of Production Estimate for: PHAs via Fermentation – Industrial Glucose Feed Process: Metabolix – Analogy to L-Lysine	99
Table X.E.2	Cost of Production Estimate for: PHAs via Fermentation – Industrial Glucose Feed Process: Metabolix – Analogy to RHM “Mycoprotein”	100
Table XI.B.1	Cost of Production Estimate for: Extracted from Switchgrass Process: Analogy to Soybean Extraction	108

## TABLES (Continued)

	<b>Page</b>
Table XI.B.2    Cost of Production Estimate for: Cogenerated Power Process: Pulverized Switchgrass Extraction Residue – Boilers/ Steam Turbine Generator	109
Table XI.C.1    Range of Production Costs for U.S. Corn (1996)	111

## FIGURES

		<b>Page</b>
Figure I.B.1	Polymer Price/Volume Exclusion Curve	6
Figure IV.B.1	Polymer Price/Volume Exclusion Curve	38
Figure VI.1	U.S. Corn Acreage	53
Figure VI.2	U.S. Corn Yield	54
Figure VI.3	U.S. Corn Production	55
Figure VI.4	U.S. Average Corn Production Costs	56
Figure VII.B.1	Switchgrass Farmgate Prices (\$/Dry ton) Assuming Median Yields	63
Figure VIII.A.1	Domestic Corn Use, 1999	69
Figure VIII.A.2	Enhancements to the Corn Value Chain	70
Figure VIII.B.1	Wet Corn Milling Value Chain	73
Figure X.E.1	Historical Commercial Glucose Syrup Pricing and Estimated “Industrial” Grade Glucose Pricing	97
Figure XI.C.1	Sensitivities of PHA Cost to Operating Rate, Raw Material Price and Capacity	114
