

Methionine and Lysine

93S7

July 1995

TABLE OF CONTENTS

	Page
I SUMMARY	1
A. BACKGROUND	1
B. CURRENT COMMERCIAL TECHNOLOGY	1
1. Scope	1
2. DL-Methionine & MHA _n : Intermediates	2
3. DL-Methionine and MHA _n : Technologies	2
(a) Rhône-Poulenc Methionine	2
(b) Degussa Methionine	2
(c) Degussa Liquimeth	3
(d) SODETI (Rhône-Poulenc) MHA _n	3
4. Production Cost Comparison	3
5. L-Lysine by Fermentation Routes	5
6. L-Lysine by Semi-synthetic Route (Toray)	5
7. Production Cost Comparison	5
C. COMMERCIAL STATUS	8
1. Methionine/MHA _n Supply/Demand Balance	8
2. L-Lysine Supply/Demand Balance	9
II CURRENT COMMERCIAL TECHNOLOGY	11
A. INTRODUCTION	11
B. DL-METHIONINE & HYDROXY ANALOGUE: COMMON COST BASIS	12
1. Production Scale	12
2. Acrolein	12
3. Methyl Mercaptan	15
4. Methional (MMP)	15
5. Hydrogen Cyanide and Sodium Cyanide	17
6. Summary of Costs and Credits	25
C. DL-METHIONINE (99% SOLID): RHÔNE-POULENC ROUTE	25
1. Methional or MMP or MTPA Route	25
2. Speculative Process Design	26
3. DL-Methionine Route	34
4. Speculative Process Design	35
5. Economics (Standard Basis)	43
D. DL-METHIONINE (99% SOLID): DEGUSSA ROUTE	43
1. DL-Methionine Route	43
2. Speculative Process Design	46
3. Economics (Standard Basis)	48
E. SODIUM METHIONINATE SOLUTION, 40% EQUIVALENT METHIONINE	54
1. Discussion of Degussa Direct Route	54
2. Speculative Process Design	55
3. Economics (Standard Basis)	59
F. DL-METHIONINE HYDROXY ANALOGUE, MHA _n : SODETI ROUTE	62
1. MHA _n (as 88% Liquid) Routes	62
2. Speculative Process Design	63
3. Economics (Standard Basis)	67

TABLE OF CONTENTS (Continued)

	Page
G. L-LYSINE: TYPICAL FERMENTATION ROUTE	73
1. Principles	73
2. Development of Microorganisms	73
3. Substrates	76
4. Typical Design Basis	77
5. Speculative Process Design: Crude Broth	80
6. Speculative Process Design: Lysine Separation	85
7. Speculative Process Design: Lysine Purification	87
8. Economics	87
H. SYNTHETIC L-LYSINE: TORAY ROUTE	92
1. Principles	92
2. Design Basis	96
3. Speculative Process Design	96
4. Economics	103
I. ECONOMIC SUMMARY	105
1. DL-Methionine and Hydroxy Analogue	105
2. L-Lysine Monohydrochloride	111
J. LICENSORS	116
1. DL-Methionine and Hydroxy Analogue	116
2. L-Lysine Monohydrochloride	116
III NEW DEVELOPMENTS	117
A. OTHER ROUTES TO METHIONINE & HYDROXY ANALOGUE	117
B. IMPROVED L-LYSINE PRODUCING ORGANISMS	117
C. OTHER ROUTES TO L-LYSINE	118
D. DIRECT USE OF L-LYSINE CONTAINING BROTHS OR SLUDGES	119
IV COMMERCIAL STATUS	120
A. APPLICATIONS	120
B. UNITED STATES	123
1. Methionine and Hydroxy Analogue Demand	123
2. Methionine and Hydroxy Analogue Supply	125
3. Methionine and Hydroxy Analogue Supply	126
4. L-Lysine Monohydrochloride Demand	127
5. L-Lysine Monohydrochloride Supply	128
6. L-Lysine Monohydrochloride Supply/Demand Balance	129
C. WESTERN EUROPE	131
1. Definition of Area	131
2. Manufactured Feed Industry	132
3. Methionine and Hydroxy Analogue Demand	132
4. Methionine and Hydroxy Analogue Supply	134
5. Methionine and Hydroxy Analogue Supply/Demand Balance	135
6. L-Lysine Monohydrochloride Demand	136
7. L-Lysine Monohydrochloride Supply	137
8. L-Lysine Monohydrochloride Supply/Demand Balance	138

**TABLE OF CONTENTS
(Continued)**

	Page
D. JAPAN	138
1. Methionine Demand	138
2. Methionine Supply	139
3. Methionine Supply/Demand Balance	139
4. L-Lysine Monohydrochloride Demand	140
5. L-Lysine Monohydrochloride Supply	141
6. L-Lysine Monohydrochloride Supply/Demand Balance	142
E. OTHER REGIONS	143
1. Methionine & MHA _n	143
2. L-Lysine Monohydrochloride	144
F. SUMMARY	146
1. Methionine & MHA _n	146
2. L-Lysine Monohydrochloride	146
REFERENCES	149

TABLES

	Page	
Table I.B.1	Production Cost Buildup for DL-Methionine and Hydroxy Analogue	4
Table I.B.2	Production Cost Buildup for L-Lysine Monohydrochloride	7
Table I.C.1	Estimated World Methionine Supply/Demand Balance, 1992-2000	8
Table I.C.2	Estimated World Lysine Supply/Demand Balance, 1992-2000	9
Table II.B.1	Cost Estimate of Acrolein Production via Propene Oxidation	16
Table II.B.2	Cost Estimate of Methional Production via MeSH Addition to Acrolein	18
Table II.B.3	Typical Operating Parameters for Andrussow Process	19
Table II.B.4	Composition of Andrussow Reactor Effluent	20
Table II.B.5	Cost Estimate of Hydrogen Cyanide Production via the Andrussow Process	23
Table II.B.6	Cost Estimate of Sodium Cyanide Production via HCN Absorption from Gases	24
Table II.B.7	Costs of Raw Materials Delivered or Transferred from Onsite Plants	25
Table II.B.8	Net Realization on Byproducts and Surplus Steam or Fuel	25
Table II.C.1	Material Balance of R-P's Methional Process	30-32
Table II.C.2	Cost Estimate of Methional Production via R-P's Process	33
Table II.C.3	Material Balance of R-P's Methionine Route	40-42
Table II.C.4	Cost Estimate of DL-Methionine Production via R-P's Process	44
Table II.D.1	Material Balance of DL-Methionine, 99% Crystal via Degussa Technology, Potassium Carbonate Recycle	50-52
Table II.D.2	Cost Estimate of DL-Methionine (99%) Production via Degussa Carbonate Recycle	53
Table II.E.1	Material Balance of Degussa Liquimeth Plant via Direct Route	57-58
Table II.E.2	Cost Estimate of Liquimeth (40%) Production DL-Methionine Equivalent Liquid via New Degussa Direct Route	60
Table II.E.3	Cost Estimate of Liquimeth as Equivalent Solid DL-Methionine 99% via New Degussa Direct route	61
Table II.F.1	Material Balance of Methionine Hydroxy Analogue, 88% Liquid Sodeti (R-P) Process	68-70
Table II.F.2	Cost Estimate of Methionine Hydroxy Analogue, 88% Liquid via Sodeti (R-P) Route	71
Table II.F.3	Cost Estimate of 99% Met Eq of MHAn, 88% Liquid via Sodeti Route	72
Table II.G.1	Some Typical Components Used in Fermentation Media	76
Table II.G.2	Fermentation Medium for Inoculum Preparation	78
Table II.G.3	Fermentation Medium for L-Lysine Production	79
Table II.G.4	Material Balance of Lysine Production by Fermentation Route - Fermentation	83-84
Table II.G.5	Material Balance of Lysine Production by Fermentation Route - Separation and Purification	89-91
