

*On-Purpose N₂O Production for
Phenol Manufacture
98/99S14*

October 1999

TABLE OF CONTENTS

	Page
I EXECUTIVE SUMMARY	1
A. INTRODUCTION	1
B. CHEMISTRY	2
C. PROCESS DESCRIPTION	4
D. ECONOMICS	5
1. Capital Investment	5
2. Production Costs	6
(a) Nitrous Oxide	6
(b) Phenol Cost of Production	8
(1) 35% N ₂ O from Fluid Bed Reactor	8
(2) Adipic Acid Sourced N ₂ O	9
3. Conventional Cumene-Based Route	10
E. CONCLUSIONS	11
 II TECHNOLOGY	 13
A. INTRODUCTION	13
B. CHEMISTRY	14
1. General	14
2. Mitsui Process	15
3. Solutia Patent	20
C. PROCESS DESCRIPTIONS	22
1. Introduction	22
2. Conceptual Flow Plan for Oxidation of Ammonia to Nitrous Oxide	23
(a) Fixed Bed Tubular Reactor	23
(b) Fluidized Bed Reactor	24
D. MATERIAL BALANCE	27
E. SOLUTIA NITROUS OXIDE BENZENE OXIDATION PROCESS	29
1. Chemistry	29
2. Reaction Mechanism	30
3. Oxidation Catalysts	31
4. Process Basis	32
5. Process Description	34
6. Alternative Reactor Design	36

TABLE OF CONTENTS (Continued)

	Page
F. CONVENTIONAL CUMENE BASED PHENOL PROCESS	38
1. Chemistry	38
(a) Cumene Oxidation to Cumene Hydroperoxide	38
(b) Cumene Hydroperoxide Cleavage to Phenol and Acetone	42
2. Process Technology	45
III ECONOMICS	52
A. BASIS	52
1. Pricing Basis	52
2. Investment Basis	53
3. Cost of Production Basis	53
B. CAPITAL INVESTMENT	54
1. Nitrous Oxide Production	54
2. AlphOx Facility	55
C. PRODUCTION COSTS	57
1. Nitrous Oxide	57
2. Phenol Cost of Production	61
(a) 35% N ₂ O from Fluid Bed Reactor	61
(b) Adipic Acid Sourced N ₂ O	61
(c) Conventional Cumene-Based Route	66
D. SENSITIVITIES	69
1. Nitrous Oxide Production	69
2. Phenol Production	69
3. Other Sensitivities	74
E. CONCLUSIONS	80
IV COMMERCIAL	82
A. INTRODUCTION	82
B. PHENOL	83
1. United States	83
(a) Demand	83
(1) Phenolic Resins	83
(2) Bisphenol A	83
(3) Caprolactam	84

**TABLE OF CONTENTS
(Continued)**

	Page
(4) Other	84
(b) Supply	84
(c) Supply/Demand Balance	85
2. Western Europe	86
(a) Demand	86
(1) Phenolic Resins	87
(2) Bisphenol A	87
(3) Caprolactam	87
(4) Other	87
(b) Supply	88
(c) Supply/Demand Balance	88
3. Japan	90
(a) Demand	90
(1) Phenolic Resins	90
(2) Bisphenol A	90
(3) Other	91
(b) Supply	91
(c) Supply/Demand Balance	92
4. Other Far East	92
(a) Demand	92
(b) Supply	93
(c) Supply/Demand Balance	93
5. Latin America	94
6. Rest of the World	95
7. Summary	95
C. ADIPIC ACID	101

TABLES

	Page	
Table I.C.1	On-Purpose N ₂ O Process Scheme Summary	5
Table I.D.1	Estimated Total ISBL Investment for Production of Phenol via AlphOx Process	6
Table II.B.1	Physical Properties of Nitrous Oxide	15
Table II.B.2	Patent Data for the Mitsui Process	17
Table II.B.3	Patent Data for Solutia Process	21
Table II.D.1	Heat and Material Balance Nitrous Oxide Process - Low Purity Case	28
Table II.D.2	Heat and Material Balance Nitrous Oxide Process - High Purity Case	28
Table II.D.3	On-Purpose N ₂ O Process Scheme Summary	29
Table II.E.1	Effect of Catalyst Water Vapor Treatment on Benzene Conversion	31
Table II.E.2	Various Operating Conditions for N ₂ O Oxidation of Benzene to Phenol	33
Table II.E.3	Process Parameters for N ₂ O Oxidation of Benzene to Phenol	34
Table III.A.1	Price and Utilities Basis	52
Table III.B.1	Estimated ISBL Investment for Ammonia Oxidation to N ₂ O Fixed Bed Reactor, Low Purity N ₂ O Case	55
Table III.B.2	Estimated Total ISBL Investment for Production of Phenol via AlphOx Process	56
Table III.C.1	Cost Estimate for: Nitrous Oxide (17% Pure); Process: N ₂ O via Ammonia Air Oxidation	58
Table III.C.2	Cost Estimate for: Nitrous Oxide (98% Pure); Process: High Purity N ₂ O via Cryogenic Recovery	59
Table III.C.3	Cost Estimate for: Nitrous Oxide 25 wt% Purity); Process: Oxidation of Ammonia w/Enriched Air	60
Table III.C.4	Cost Estimate for: Nitrous Oxide (35% Pure); Process: Fluid-Bed Process w/Enriched Air	62
Table III.C.5	Cost Estimate for: Phenol; Process: from Benzene (Solutia) using 35% Purity N ₂ O	64
Table III.C.6	Cost Estimate for: Phenol; Process: from Benzene (Solutia) N ₂ O at Zero Value	65
